

Snow and Ice Workshop in Notodden/N

The exciting interaction of snow, ice and lighting design will be the theme of the PLDA workshop in the south-east Norwegian town Notodden from 26. to 31. January 2009!

Water plays an essential role in this town. Located on a beautiful Fjord, Notodden has been generating energy for several centuries using hydro-power.

The workshop groups, headed by experienced international lighting designers, will analyse real sites and implement the design concepts they develop.

The following professional lighting designers have been selected to head the workshop teams in Notodden:

- Alfred Borden, IALD, PLDA/USA
- Cinzia Ferrara, PLDA/I
- Philip Rose, PLDA/UK
- Peter List/D
- Guðjón L. Sigurðsson, PLDA/IS
- Niklas Ödman, PLDA/S
- The Church
- The Museum Square
- The Waterfront
- The Villa
- The Power Station
- The Bridge and Pylons

The challenge will be to enhance this primarily industrial town during the icy winter, addressing its history and the breathtaking natural surroundings.
